

## Preferred Artwork Format for CD and DVD Duplication

For the on body printing of your CD or DVD disc please supply us with a 120mm square graphic. You can send your artwork in PDF format, but please select “high quality print” in the Adobe setup. If your artwork is set up as a 120mm square, we do not need trim marks, as we can centre the work accurately to the centre marker. We output PDFs via Adobe Illustrator, so please convert your artwork to curves or outlines prior to creating the PDF.

Please do not supply any line work showing the outline of the disc, this is not necessary, we will mask your artwork to fit the exact printable area of the DVD or CD.

### Graphic Formats:

Please set all your graphics to a minimum of 300dpi and the colour settings to CMYK. This will provide you with the best resolution for your discs. If you are supplying us with Photoshop or Illustrator files, please be aware that our standard colour working spaces for Illustrator are:

### Euroscale Coated V2 for CMYK Adobe RGB

Artwork supplied with any other settings can produce colour variations for which we cannot be held responsible. If you have used different working spaces please re-set them to the above settings, and check that your colours are correct before sending us your finished artwork. Please also be aware that you will need to make sure that any PDF proofs from us are also viewed with the above settings installed to Acrobat Reader.

We can also accept most standard graphics formats including TIFF and JPEG. If you are creating your artwork in Quark, please convert the text to curves or outline then produce a PDF in high resolution.

### Paper Parts

For any paper parts please supply high resolution PDF files with trim marks and a minimum of 3mm bleed. Also see our Printed Parts Dimensions PDF for sizing. Please contact us for any further information.
